#### Software:

I am an active developer of a large variety of astronomical python software tools and a contributor to astropy and its affiliates. My github profile (github.com/keflavich) contains a complete list of projects. Below is a selection of my most popular packages:

- astroquery (https://astroquery.readthedocs.org): a toolkit for querying internet-hosted astronomical databases
- pyspeckit (https://pyspeckit.bitbucket.org): a software suite for visualizing and analyzing spectral line and spectral cube data
- spectral-cube (https://spectral-cube.rtfd.org): a library for the manipulation of radio spectral cube data
- pyradex (https://github.com/keflavich/pyradex): an object-oriented frontend to the popular RADEX radiative transfer code and its peers
- image-registration (https://github.com/keflavich/image\_registration): a package designed to determine and correct the offsets between images containing only diffuse emission
- sdpy (https://github.com/keflavich/sdpy): "Single-Dish python", a package to support single dish heterodyne data reduction and build data pipelines
